

ZAMBIA'S 1ST AGROECOLOGY CONFERENCE

“A CALL TO A HOLISTIC, INCLUSIVE AND ENVIRONMENTALLY FRIENDLY FOOD PRODUCTION SYSTEM”

The call for a transformation towards a more holistic, inclusive, and environmentally friendly food production narrative aligns with a growing global awareness of the need for sustainable environmental management. This involves adopting practices that ensure food security and prioritize ecological conservation, social equity, and economic viability.

Evidence Gathering:

- Present research findings on agroecological practices.
- Share success stories and case studies from practitioners.

Awareness Creation:

- Conduct sessions to increase understanding of agroecology.
- Highlight the benefits of adopting agroecological practices.

Policy Influence:

- Engage policymakers in discussions on the importance of agroecology.
- Propose policy recommendations to support agroecological practices.

Promoting Adoption:

- Facilitate discussions on practical implementation of agroecological methods.
- Showcase real-life examples of successful agroecological farms.

Advancing Agroecology for Sustainable Food Systems in Zambia.

It is evident that the existing model of food production has not been effective in addressing the complex issues of climate change, biodiversity loss, pollution, and environmental degradation.

Overall, agroecology in Zambia will represent a holistic and sustainable approach to agriculture that aligns with local ecological conditions and community needs. It offers an alternative to conventional industrial agriculture by emphasizing resilience, biodiversity, and community well-being.
